Research Information Exchange Markup Language

This is a compilation product made up of items from the MSDW NY Morning Meeting call. It covers Strategy, Economics, Industry and Company items. Therefore the ProductFocus was set at the Discipline level as this is a cross discipline publication, within the 'Equity' Asset Class. Also the Subject was set to 'Morning Call' to indicate that this is the main reason for the publication, to cover topics from the MSDW morning meeting. For Source, we added the list of all contributing Strategists and Analysts, all at the same Primary level, though they will be listed on a display using Sequence field values of 1 to 10 in the order in which they appear on the Summary. The resourceID we used the filename convention that we use internally. This will have to be modified to ensure that we have unique identifiers. For the Legal section, we added Copyright, Disclaimer and Disclosures, keeping them separate in the event that somebody wants to search on research where the publisher has no involvement in a company. We also added an ExpirydateTime value to Context to indicate that this publication would be expired after one month. For Recommendations on each company that the report covers, we added the Publisher Defined Recommendation. We included both MSDW and GICS industry classification at both the Issuer level and the SectorIndustry level within Context. No Security information was added, everything was added at the issuer level. Being a Summary, it wasn't deemed necessary to add financial information on every company mentioned.
