In our opinion at [RIXML.org](http://RIXML.org), this is one of the most important conferences held in the financial services industry since it addresses issues and topics directly related to Research creation and distribution.

[RIXML.org](http://RIXML.org) represents the “standard” for creation, tagging, distribution, and, retrieval of Research utilizing the powerful technology tool – XML. XML (Extensible Markup Language) is a W3C initiative that allows information and services to be encoded with meaningful structure and semantics that computer and humans can understand. XML is great for information exchange, and can easily be extended to include user-specified and industry-specified tags.
